

Meeting Customer Needs

- Never replace batteries
- Eco-friendly, no disposal issues
- Low cost automated assembly
- Thin profile - Small footprint
- Embed at board or chip level
- Flexible attachment options

With Superior Solutions

- Simple “drop in” power
- SMT/Reflow solder tolerant
- No special transportation or disposal
- Rechargeable – Lasts life of product
- 2 Fabs for high volume production
- Many applications, many industries

Embed with other ICs	✓	!	!
Advanced power management	✓	!	!
Energy Manager/RTC	✓	!	!

Products	Description
	CBC005 – EnerChip bare die 5uAh Rechargeable Battery 1.7 x 2.25mm
	CBC012 – EnerChip bare die 12uAh Rechargeable Battery 2.8 x 3.5mm
	CBC050 – EnerChip bare die 50uAh Rechargeable Battery 5.7 x 6.1mm
	CBC910 – Power Management bare die for EnerChip battery management 1.1 x 1.1mm
	CBC34123 – EnerChip RTC: Real Time Clock + EnerChip + PMIC 5x5mm 16-pin QFN, SPI
	CBC34803 – EnerChip RTC: RTC+ EnerChip + PMIC 5x5mm 16-pin QFN I2C-bus
	CBC34813 – EnerChip RTC: RTC+ EnerChip + PMIC 5x5mm 16-pin QFN SPI-bus
	CBC-EVAL-12 – EnerChip RTC Eval kit – USB to PC with tabs for 34123, 34803 or 34813

RTC + EnerChip + PMIC in a Chip

30 hours Backup

100 hours Backup

CBC34123
SPI-bus
NXP RTC

CBC34803 I2C-bus
CBC34813 SPI-bus
Ambiq Micro RTC

Key Customer Power Backup Questions:

1. Backing up time, data registers, other?
2. Current draw of the device to be powered?
3. Determine back-up time, 99.7% are < 4 hours?
4. Is small footprint, thin package important?
5. Issues using coin cells or supercaps?
6. Is battery replacement or disposal important?
7. Is SMT, reflow solder & RoHS needed?
8. Need Power Fail Detect or Using V_{BAT} pin?

EnerChip Environmental and Safety Compliance
